GROWING DEGREE UNITS MID-POLLINATION: 1266
BLACK LAYER: 2550
LOT NO. 757XM3JM ORIGIN GERM DATE TESTED
VARIETY 1052505: 94.00% NE 95% 11/15
TREATMENT: WAH2V
VARIETY 1056251 5.00 % MI 95% 11/15
TREATMENT: WAH2V
INERT MATTER: 0.40 %
WEED SEED: 0.00 %
OTHER CROP SEED: 0.60 %
NOXIOUS WEEDS/LB: NONE
KIND: FIELD CORN
SUGGESTED PLATE: JD B25
CIH C25

This is a product of MONSANTO's research program offering unique genetic characteristics for specific grower needs and protected by U.S. patent(s): PENDING
General Information: Handle treated seeds in ventilated areas. Avoid breathing or making contact with dust. If contaminated, remove clothing and launder before reuse. Wash hands and face before eating, drinking, or smoking. Treated seeds exposed on soil surface may be hazardous to wildlife. Cover or collect spilled treated seeds spilled during loading and planting.

Personal Protective Equipment: Wear long sleeved shirt, long pants, socks and shoes, chemical resistant gloves, and, if indicated for the specific product, goggles and a dust mask when handling treated seeds.

Hazards to Humans and Animals: Harmful to humans if swallowed, inhaled or absorbed through skin. Ingesting of treated seed may be hazardous to domestic animals, livestock and other wildlife.

Disposal: Dispose of all excess treated seed. Leftover treated seed may be double-bagged around the headland or buried away from water sources in accordance with local requirements. Do not use empty seed bags for any other purpose. Do not contaminate water bodies when disposing of planting equipment washwaters. Dispose of washwaters, seed packaging or containers in accordance with local requirements. Excess treated seed may be used for ethanol production only if: (1) By-products are not used for livestock feed, and (2) No measurable residues of pesticides remain in ethanol by-products that are used for agronomic practice.

FIRST AID: Eyes: Hold eye open and rinse gently with water for 15 minutes. If wearing contact lenses, remove after first 5 minutes and continue rinsing. Skin or clothing: Remove contaminated clothing. Rinse skin immediately with plenty of water. Use soap if available. Swallowed: Call poison center or doctor immediately for treatment advice. Sit with water if able to swallow. Do not induce vomiting unless told to do so by the poison center or doctor. Do not give anything by mouth to an unconscious person. Inhalation: Move to fresh air. If not breathing, call 911 or ambulance, and then give artificial respiration.

PRODUCT SPECIFIC ADDITIONAL INFORMATION

CLOTHIANIDIN-TREATED SEED: Immediate Plant-Back: Corn, grass fields, field corn, popcorn, sweet corn, rapeseed, canola, soybeans, root and tuber vegetables; 30-Day Plant-Back: Grasses, non-grass animal feeds, dry beans. 6-Month Plant-Back: Sugar cane. 12-Month Plant-Back: Any crops without an earlier plant-back interval.

CLOTHIANIDIN + BACILLUS FIRMUS I-1582-TREATED SEED: This seed has been treated with PONCHO®+VOTIVO®, which contains 40.3% clothianidin and 8.1% Bacillus firmus I-1582. The planting equipment that will plant treated seed into the soil to a minimum depth of 0.5 inch. Regardless of type of application (seed treatment or t.o.r.), do not apply more than 0.2 lbs (3.4g) per acre. This component is toxic to bees exposed directly (contact). Ensure that planting equipment is functioning properly in accordance with manufacturing recommendations to minimize seed coat abrasion during planting to reduce dust which can drift to blooming crops or weeds. This compound is toxic to bees and mammals. Immediate Plant-back: Corn fields, grass fields, field corn, popcorn, sweet corn, rapeseed, canola, soybeans, root and tuber vegetable; 30-Day Plant-Back: Grasses, non-grass animal feeds, dry beans. 6-Month Plant-Back: Sugar cane. 12-Month Plant-Back: Any crops without an earlier plant-back interval.

FLUCONAZOLE - MEFENOXAM-TREATED SEED: Corn and popcorn types may not be grazed until 30 days after planting.

PENTUFLUFEN-TREATED SEED: After the seed and/or seed pieces have been planted in soil or other planting media, DO NOT enter or allow worker entry into areas with treated seeds during the restricted-entry interval of 12 hours, except that workers may enter the areas with treated seeds without restriction if there will be no worker contact with the soil/media subsurface. Treated seeds must be planted at a minimum depth of 0.5 inches. Crops for which there are registered uses of pentafen, which includes alfalfa, potatoes (Crop Group 12), legumes (Crop Group 67), canola (Crop Group 15/16), and oil seeds (Crop Group 20) may be replanted at any time. All other crops may be planted no less than 30 days after treating treated seeds. This pesticide is toxic to fish. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Runoff may be hazardous to aquatic organisms in water adjacent to treated areas. The maximum number of applications per year is 3. For corn: Do not exceed 0.003 lb a.i. (0.5 g a.i.) per crop season. TRIFLOXYSTROBIN-TREATED SEED: After the seeds have been planted, do not enter or allow worker entry into treated areas during the restricted entry interval of 12 hours. Exception: Once the seeds are planted in soil or other planting media, the Worker Protection Standard allows workers to enter the treated area without restriction if there will be no worker contact with the treated seeds in the soil or planting media. Areas planted with treated seed may be replanted immediately with any crop for which a tolerance exists for trifloxystrobin. Do not plant any crop without trifloxystrobin tolerance until 30 days after planting trifloxystrobin-treated seed.
